

Measure Tip Sheet: LDL screening

From QHP physicians

1. Consider visits every 3-6 months for patients with chronic conditions.
2. Continuous glucose monitoring
3. Educate your patients on labs and their significance.
4. Use technology in the EMR or appointment card or calendar to remind patients to get labs done before visit.
5. Have resulted labs available at the visit so you can review with the patient.
6. Have patients take an active role in their care.
7. Encourage patients to view their results within the portal.
8. Utilize your wonderful nursing staff! Use a team approach.
